Cleans the air and **all surfaces** in seconds —safe for use on metals and fabrics

How Nano Hope Works

APPLY

Removes soil load from all surfaces

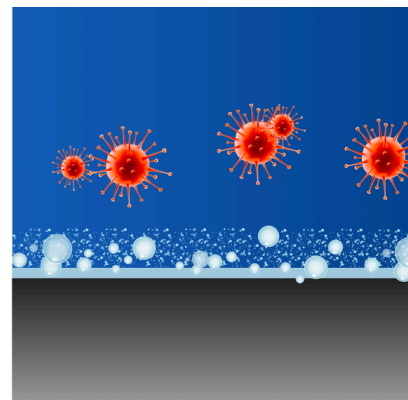

DESTROY

Destroys 100% of soil load on surfaces

PROTECT

Forms a protective surface barrier

PREVENT

Prevents surface contamination for **5 days**

Learn More about Nano Hope's Surface Cleaner + Defense Barrier

1.

What's the difference between cleaning and sanitizing?

Cleaning removes dirt and debris from surfaces, while sanitizing reduces germs to safe levels. Our product is step one in a two-step process—first use Surface Cleaner + Defense Barrier to clean and protect surfaces for 5 days, then follow with your sanitizer to disinfect against germs.

2.

Doesn't a disinfectant replace the need for a surface cleaner?

No—you must clean before you disinfect. When you apply disinfectant to a dirty surface, you'll wipe away the disinfectant, making it ineffective. Only after a surface is clean can a disinfectant properly sit on the clean surface long enough to kill germs. These two steps are essential for effective results.

3.

What makes Nano Hope's Surface Cleaner + Defense Barrier unique?

Unlike standard cleaners that only remove dirt temporarily, our solution creates a protective nano-shield lasting 5 days. This barrier prevents contaminants from adhering to surfaces, making cleaning easier and more effective. The combination of cleaning and lasting protection sets us apart.

4.

What makes the protective barrier so special?

Our protective barrier prevents substances from sticking to surfaces - spills simply bead up and roll off instead of leaving residue. This coating lasts for 5 days, making cleaning effortless. You'll save time and money as one application keeps surfaces clean for nearly a week.

5.

Where is NH Surface Cleaner + Defense Barrier most effective?

Being chemical-free and non-corrosive, our cleaner safely works on all high-traffic areas without harming people or materials. It's perfect for doorknobs, desks, tables, doors, shower walls, and even floors. The protective barrier maintains cleanliness on any surface for up to 5 days.
